

Enhancing Zomato's Ecosystem to drive GOLD Subscriptions And User Engagement

K.Susheel Kumar | IIT Bhubaneswar

About **zomato**

Zomato is a leading Indian online platform for food ordering, delivery, and dining services. With a consumer-first approach and a focus on enhancing every customer experience, Zomato operates in over 800 cities across India. The platform goes beyond by offering dineout services for table reservations and features for booking events such as concerts and live shows.

Business Model

Zomato runs a food-focused platform connecting users with restaurants through its delivery network. It earns revenue via restaurant commissions, user subscriptions like Zomato Gold, and services like event ticketing, offering a full-stack food and lifestyle experience.

About **blinkit**

Blinkit is a leading Indian quick commerce platform that delivers groceries and daily essentials within minutes. Operating in major cities, it offers a fast, convenient, and reliable shopping experience, transforming how consumers access everyday needs.

Bussiness Model

Blinkit is a quick commerce platform that delivers groceries and essentials within minutes. It earns revenue through delivery fees, product markups, and partnerships with local stores, offering a fast and convenient shopping experience.

Problem Statement:

zomato
GOLD, once a flagship loyalty program, is facing stagnation in subscriber growth and engagement. With rising competition from integrated offerings like Swiggy One and Zepto Pass, users now expect more personalized, value-rich, and cross-functional benefits. Zomato's current ecosystem lacks modular flexibility and daily relevance — limiting the appeal of Gold beyond food delivery.

Objectives:

- Identify key drivers of **Zomato GOLD** subscription .
- Enhance value proposition of **Zomato GOLD** subscription.
- Develop targeted marketing strategy to increase subscription rate of **Zomato GOLD**.

Benefits of solving the problem:

- Increased revenue and profitability .
- Enhanced user engagement and loyalty.
- Outpace Competitive Offerings.
- Improve User Retention
- Strengthen Ecosystem Stickiness.

What is **zomato** **GOLD**

It is a premium subscription based program that offers exclusive benefits for its users like:

- Free delivery
- Exclusive discounts
- Dine-out benefits
- No surge pricing
- Early access to events and offers

**18.5 Million monthly
transacting customers**

**7.4 Million users with
Zomato GOLD
Subscription**

**11 Million
casual users**

Root Cause Analysis using 5 Why's method:

1st Why :

Why users are not taking gold?

Because they can't see the value for it

2nd Why :

Why they don't see enough value?
Because market competitors offers more cross category benefits.

3rd Why :

Why Zomato's offers are less likely for users?
Because it is not well integrated with Blinkit limiting bundled value.

Root Cause :

Because Zomato initially treated Blinkit and Gold as distinct business verticals with separate product goals — creating organizational silos that slowed down cross-product bundling and ecosystem thinking.

5th Why :

Why wasn't Zomato Gold evolved sooner to include Blinkit despite having the capability?

4th Why :

Why it is not integrated?
Gold is actually designed for food-only benefits and it is not changed after the launch of Blinkit

User Personas

Mohith Varma | 33 | Sales Executive

Behaviour:

- Orders food 3–4 times/month, groceries from Blinkit every 2–3 days.

Pain Points:

- Doesn't want to pay for services he doesn't fully use.
-

Priya Mohan | 28 | Consultant

Behaviour:

- Eats out 5–6 times/week due to long hours, but tracks calories using fitness apps.

Pain Points:

- Finds it hard to eat healthy when ordering food.
-

Kabir Saini | 30 | Freelance Designer

Behaviour:

- Eats every meal outside; health fluctuates; hard to find consistent options when traveling.

Pain Points:

- Constantly traveling to cities where Zomato and Blinkit aren't accessible, but end up paying subscription.

Recommendations:

#1 Build Your Own Gold : Modular, customizable membership plans

Feature Explanation:

A flexible Gold subscription where users choose the benefits they need — instead of a one-size-fits-all plan.

Users can choose modules while activating the plan like :

- Blinkit-only
- Food Delivery-only
- Dine-in-only
- All-in-One Bundle

Key Features:

- Toggle-based controls for choosing modules.
- usage-based countdown
- Auto-pause subscription whenever services are unavailable in certain locations

Strategic Value:

- Increases adoption by lowering entry cost
- Caters to seasonal/nomadic users
- Drives upsell to full Gold via personalized usage prompts

Recommendations:

#2 DailyPlate: Personalized nutrition planner integrated into Zomato

Feature Explanation:

A wellness initiative within Zomato that lets users:

- Set weekly calorie goals and meal frequency
- Select dietary preferences (veg, keto, high-protein, low-carb, etc.)
- Pick preferred days/times for meal guidance
- Recommends meals from partner restaurants that match user goals

Key Features:

- Personalized goal setting for calories and diet types
- Smart meal recommendations based on health profile
- Calorie and macro breakdown on dishes

Strategic Value:

- Turns Zomato into a health-tech + food-tech hybrid
- Appeals to working professionals, and fitness-focused customers
- Differentiates Zomato from competitors via lifestyle-driven loyalty

Recommendations:

#3 Golden Miles: Unified cross-category loyalty currency

Feature Explanation:

A cross-platform reward system where users earn and redeem points for orders across:

- Zomato food delivery
- Blinkit groceries
- Dine-in experiences

Redemption Options:

- Dine-in offers
- Partnered offers (desserts, premium meals, groceries)
- Early-access features, curated boxes

Strategic Value:

- Drives frequency and cross-app usage
- Builds long-term engagement via emotional, social, and practical incentives
- Gives users visible ROI on every action (spending = earning)

Feature Proritization using RICE Framework :

RICE = Reach x Impact x Confidence / Effort

Feature	Reach	Impact	Confidence	Effort	RICE Score
#1 Build your own Gold	8	9	8	7	82.2
#2 DailyPlate	7	8	7	8	49
#3 Golden Miles	9	8	8	6	96

Prioritization Overview :

Golden Miles (MR. RICE Score = 96)

Creates a gamified loyalty ecosystem across Zomato, Blinkit, and dine-in with wide reach and emotional appeal. Drives frequency and repeat orders, and boosts engagement through rewards and tiers. Confidence is high due to proven success of loyalty programs in retention. Requires moderate backend work for tracking, redemptions, but offers high cross-platform value.

Build Your Own Gold (MR. RICE Score = 82.2)

Offers high strategic value by letting users customize Gold subscriptions — Blinkit-only, food-only, dine-in, or all. Its wide reach and strong impact on adoption and retention make it a top priority. Confidence is high, supported by modular trends and user demand for flexibility. Implementation effort is moderate due to toggle controls, usage tracking, and modular billing logic.

DailyPlate (MR. RICE Score = 49)

Adds a health-focused layer through calorie tracking, goal-setting, and smart meal suggestions. Impact on retention is strong, but reach is limited to health-conscious urban users. Confidence is moderate; food-health awareness is rising but audience is still niche. Implementation is complex due to nutrition tagging, tracking logic, and UI design — best as a long-term investment.

GTM Strategy:

PHASE 1 (Immediate Priority): Launch Golden Miles

Introduce Golden Miles as a unified loyalty layer to reward users across Zomato, Blinkit, and dine-in. With its broad reach and low friction, it can quickly drive engagement, repeat orders, and emotional loyalty without requiring users to opt into a subscription. Early rollout builds a wide, habit-driven user base.

PHASE 2 (Secondary Priority): Launch Build Your Own Gold

Once Golden Miles has boosted activity and user retention, roll out the modular Gold subscription to convert active users into paying subscribers. This feature offers control and flexibility by letting users pick benefits relevant to them — especially powerful in Tier 2/3 markets. Launching it after Golden Miles allows Zomato to tie Miles rewards to paid plan tiers, increasing perceived value and upsell potential.

PHASE 3 (Later Priority): Introduce DailyPlate

With a loyal and modular user base in place, introduce DailyPlate to target health-conscious urban users seeking structured eating habits. While the audience is niche, this feature positions Zomato as a wellness-conscious platform. It pairs well with Gold and Miles through streak rewards and healthy behavior incentives. Roll out later when data, tagging, and partner restaurants are prepared to support the ecosystem.

Thank You
